#### NEBRASKA ADMINISTRATIVE CODE

## Title 117 - NEBRASKA DEPARTMENT OF ENVIRONMENTAL QUALITY

## Chapter 1 - DEFINITION OF TERMS

- <u>001</u> "Acute Criteria" shall mean the threshold concentration of a substance that aquatic organisms can be exposed to for a period of 96 hours or less with no resulting acute toxicity.
- <u>002</u> "Acute Mixing Zone" shall mean the limited area or volume of a waterbody, as designated by the Department, which adjoins a point source discharge, where acute criteria may be exceeded while wastewaters which have received the applicable level of treatment or control are allowed to assimilate, disperse, dissipate, or undergo chemical transformation.
- <u>003</u> "Acute Toxicity" shall mean the response of an aquatic organism to a concentration of a substance which results in injury or mortality within a period of 96 hours or less.
- $\underline{004}$  "Acute Toxic Units (TU<sub>a</sub>)" shall mean the reciprocal of the effluent dilution that causes an acute effect (e.g., LC<sub>50</sub>) to the test organism by the end of the acute exposure period.
- 005 "Applicable Level of Treatment or Control" shall mean that treatment or control which is required by Title 119 Rules and Regulations Pertaining to the Issuance of Permits under the National Pollutant Discharge Elimination System; Title 120 Procedures Pursuant to Section 401 of the Federal Clean Water Act, 33 U.S.C. § 1251 Et Seq., for Certification by the Department of Activities Requiring a Federal License or Permit which may Result in a Discharge; or which is otherwise specified by the Department considering best available technology and management practices.
- <u>006</u> "Beneficial Use" shall mean any productive use of surface waters for which water quality is protected. Beneficial uses include but are not limited to agricultural, industrial, and public water supplies; support and propagation of fish, and other aquatic life; recreation in and on the water; and aesthetics. Waste assimilation, disposal, or transport are not beneficial uses.
- <u>007</u> "Bioassay" shall mean a test used to evaluate the relative toxicity of a substance by comparing its effect on a living organism to the effect of a standard preparation (control) on the same type of organism.

## Chapter 1

- <u>008</u> "Canal" shall mean an artificial waterway constructed for the purpose of developing water power, or any other useful purpose, and from which water can be taken for irrigation.
- <u>009</u> "Chronic Criteria" shall mean the threshold concentration of a substance that aquatic organisms can be exposed to for a period exceeding 96 hours with no resulting chronic toxicity.
- <u>010</u> "Chronic Mixing Zone" shall mean the limited area or volume of a waterbody, as designated by the Department, which adjoins a point source discharge, where chronic criteria may be exceeded while wastewaters which have received the applicable level of treatment or control are allowed to assimilate, disperse, dissipate, or undergo chemical transformation.
- <u>011</u> "Chronic Toxicity" shall mean the response of an aquatic organism to a concentration of a substance which results in adverse effects such as injury, mortality, reduced growth, or impaired reproduction after period of exposure exceeding 96 hours.
- $\underline{012}$  "Chronic Toxic Units ( $TU_c$ )" shall mean the reciprocal of the effluent dilution that causes no chronic toxicity to the test organisms by the end of the chronic exposure period.
- <u>013</u> "Clean Water Act" shall mean Public Law 92-500, as amended by Public Law 95-217 and Public Law 100-4, 33 U.S.C. §1251 et seq.
- <u>014</u> "Colloidal Substances" shall mean clay or other substances which do not settle out of suspension in water without the use of a flocculent.
- <u>015</u> "Conductivity" shall mean a measure of the ability of water to conduct an electrical current which is expressed in micromhos per centimeter. Conductivity is related to the number and types of chemical ions or dissolved solids in solution.
- <u>016</u> "Cubic Foot per Second (cfs)" shall mean the unit of measurement used in reporting stream discharge, sometimes referred to as second-foot (sec-ft). It is a volume of one cubic foot passing a given point during one second of time and is equivalent to 7.48 gallons per second or 448.8 gallons per minute.
- <u>017</u> "Daily Mean" shall mean an average of at least two appropriately spaced measurements, as determined by the Department, calculated over a period of one day. In calculating the daily mean for dissolved oxygen, values used in the calculations shall not exceed the dissolved oxygen air saturation value. If a measured value exceeds the dissolved oxygen air saturation value, then the dissolved oxygen air saturation value shall be used in calculating the daily mean.

#### Chapter 1

- <u>018</u> "Department" shall mean the Nebraska Department of Environmental Quality.
- 019 "Dissolved Oxygen (DO)" shall mean a measure of the amount of free oxygen in the water.
- <u>020</u> "Dissolved Oxygen Air Saturation Value" shall mean the concentration of dissolved oxygen which represents 100 percent saturation at any given point in a water body based on the water temperature and atmospheric pressure.
- <u>021</u> "EPA" shall mean the United States Environmental Protection Agency.
- <u>022</u> "Early-Life Stages" shall mean all embryonic and larval stages and all juvenile forms of aquatic life to 30 days following hatching.
- <u>023</u> "Effluent" shall mean wastewater, excluding sludge, discharging from a wastewater treatment works.
- <u>024</u> "Endangered Species" shall mean, for the purpose of this Title, any aquatic species identified by the Nebraska Game and Parks Commission whose continued existence as a viable component of the wild fauna of the State is determined to be in jeopardy or which meets the criteria of the Federal Endangered Species Act.
- <u>025</u> "Epilimnion" shall mean the warm, freely circulating upper layer of thermally stratified lakes.
- <u>026</u> "Existing Uses" shall mean those beneficial uses actually attained or attainable in a water body on or after November 28, 1975, whether or not they are included in these standards.
- $\underline{027}$  "Fecal Coliform" shall mean the portion of the coliform bacteria group which is present in the gut or feces of warm-blooded animals and generally includes organisms which are capable of producing gas from lactose broth in a suitable culture medium within 24 hours at  $44.5 \pm 0.5$ °C.
- <u>028</u> "Four-Day Average" shall mean an average of the daily mean values calculated over a period of four consecutive days.

## Chapter 1

- <u>029</u> "Garbage" shall mean rejected food wastes, including waste accumulation of animal, fruit, or vegetable matter used or intended for food or that attend the preparation, use, cooking, dealing in, or storing of meat, fish, fowl, fruit, or vegetables, and dead animals rejected by rendering plants.
- <u>030</u> "Hardness" shall mean a characteristic of water which represents the total concentration of polyvalent cations (e.g., calcium, magnesium) expressed as calcium carbonate in mg/l. Hardness may be calculate for most waters by adding together the values obtained from multiplying the concentrations of calcium by 2.497 and magnesium by 4.116 to obtain the equivalent calcium carbonate concentration.
- <u>031</u> "High-Rate Diffusers" shall mean devices attached to, or part of, a discharge outfall structure which provide discharge velocities that promote turbulent initial mixing of wastewaters with the receiving water.
- <u>032</u> "Human-Induced Conditions" shall mean conditions that have been influenced by human activities.
- <u>033</u> "Hypolimnion" shall mean the cold, relatively undisturbed lowermost layer of thermally stratified lakes.
- <u>034</u> "Impounded Waters" shall mean manmade or naturally occurring collections or confinements of water.
- <u>035</u> "Junk" shall mean old scrap, copper, brass, iron, steel, rope, rags, batteries, paper, trash, rubber debris, waste, dismantled or wrecked automobiles, or parts thereof, and other old or scrap ferrous or nonferrous material.
- <u>036</u> "Key Species" shall mean identified endangered, threatened, sensitive, or recreationally-important aquatic species associated with a particular water body and its aquatic life use class.

## Chapter 1

- <u>037</u> "Lake or Impounded Water" shall mean any waterbody with all of the following characteristics: (1) situated in a topographic depression or a dammed stream channel; (2) 30 percent or less areal coverage of trees, shrubs, persistent emergent aquatic plants, or emergent mosses; and (3) total area exceeds 20 acres. Similar waterbodies totaling less than 20 acres are also included if an active waveformed or bedrock shoreline feature makes up all or part of the boundary, or if the water depth in the deepest part of the basin exceeds 6.6 feet. Impounded waters in this definition do not include areas designated by the Department as wastewater treatment or wastewater retention facilities or irrigation reuse pits.
- $\underline{038}$  "LC<sub>50</sub>" shall mean the statistical estimate of the concentration of a substance which kills 50 percent of the bioassay test organisms under test conditions specified or approved by the Department.
- <u>039</u> "Metalimnion" shall mean the layer of a thermally stratified lake which exhibits a steep temperature gradient and separates the epilimnion above from the hypolimnion below.
- <u>040</u> "Milligrams per Liter (mg/l)" shall mean the milligrams of substance per liter of solution, equivalent to parts per million assuming unit density of the solution.
- <u>041</u> "Mixing Zone" shall mean the limited area or volume of a water body, as designated by the Department, which adjoins a point source discharge, and into which wastewaters which have received the applicable level of treatment or control are allowed to assimilate, disperse, dissipate, or undergo chemical transformation.
- <u>042</u> "Natural Background" shall mean shall mean quantifiable measurements of water quality existing in the absence of water pollution.
- <u>043</u> "No Observed Effect Level (NOEL)" shall mean the threshold concentration of a substance which causes no observed adverse effects to bioassay test organisms under test conditions specified or approved by the Department.
- <u>044</u> "Noncontact Cooling Water" shall mean water used to reduce temperature which does not come into direct contact with any raw material, intermediate product, waste product (other than heat), or finished product.
- <u>045</u> "Nonpoint Source" shall mean any source of pollutants other than those defined as point sources.

## Chapter 1

- <u>046</u> "Nuisance Aquatic Life" shall mean species of aquatic flora or fauna whose noxious characteristics or presence in sufficient numbers, biomass, or areal extent may reasonably be expected to prevent or interfere with a beneficial use.
- <u>047</u> "One-Day Minimum" shall mean the lowest daily instantaneous value measured.
- <u>048</u> "One-Day Ten-Year (1Q10) Low Flow" shall mean the discharge at the ten-year recurrence interval determined from a frequency distribution of annual values of the lowest discharge for one day.
- <u>049</u> "One-Hour Average" shall mean an average of at least two appropriately spaced measurements, as determined by the Department, calculated over a period of one hour.
- 050 "Petroleum Oils" shall mean all oils other than oils of vegetable and animal origin.
- $\underline{051}$  "pH" shall mean the negative logarithm of the hydrogen ion concentration (pH = -log [H<sup>+</sup>]). pH expresses both the acidity and alkalinity of water on a scale from 0 to 14, with 7 representing neutrality (numbers less than 7 denote increasing acidity, and numbers greater than 7 denote increasing alkalinity).
- <u>052</u> "Point Source" shall mean any discernible confined and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, or vessel or other floating craft, from which pollutants are or may be discharged.
- <u>053</u> "Pollutant" shall mean any gas, liquid, or solid introduced into a body of water that causes water pollution. Pollutants under this definition include, but are not limited to, dredged spoil, solid waste, incinerator residue, sewage, garbage, sewage sludge, munitions, chemical wastes, biological materials, radioactive materials, heat, wrecked or discarded equipment, rock, sand, cellar dirt, and industrial, municipal, and agricultural waste discharged into water.
- <u>054</u> "Recreationally-Important Species" shall mean any game fish species identified by the Department, or any hybrid thereof, which is important to sport fishermen and readily affected by water quality degradation.
- <u>055</u> "Refuse" shall mean putrescible and nonputrescible solid wastes, except body wastes, and includes garbage, rubbish, ashes, incinerator ash, incinerator residue, street cleanings and solid market and industrial wastes.

## Chapter 1

- <u>056</u> "Resident Species" shall mean those species that typically occur in a water body including those that occur only seasonally or intermittently. Species that were once present but can no longer return due to physical habitat alterations are not included.
- <u>057</u> "Rubbish" shall mean nonputrescible solid wastes, excluding ashes, consisting of both combustible and noncombustible wastes, such as paper, cardboard, tin cans, yard clippings, wood, glass, bedding, crockery, or litter of any kind that will be a detriment to the public health and safety.
- <u>058</u> "Salmonid" shall mean any fish belonging to the family Salmonidae. Trout are members of this family.
- <u>059</u> "Sensitive Species" shall mean any aquatic species identified by the Department which has a limited distribution in the State and is indigenous to stable, high quality aquatic environments.
- <u>060</u> "Settleable Solids" shall mean substances such as silt, organic detritus, plankton, or sand, which settle to the bottom of a water body or water column.
- <u>061</u> "Seven-Day Mean" shall mean an average of the daily mean values calculated over a period of seven consecutive days.
- <u>062</u> "Seven-Day Mean Minimum" shall mean an average of the one-day minimum values calculated over a period of seven consecutive days.
- <u>063</u> "Seven-Day Ten-Year (7Q10) High Flow" shall mean the discharge at the ten-year recurrence interval determined from a frequency distribution of annual values of the highest average discharge for seven consecutive days.
- <u>064</u> "Seven-Day Ten-Year (7Q10) Low Flow" shall mean the discharge at the ten-year recurrence interval determined from a frequency distribution of annual values of the lowest average discharge for seven consecutive days.
- <u>065</u> "Standards" shall mean rules or regulations which are comprised of the water quality criteria that are necessary to protect the beneficial uses of surface waters.
- <u>066</u> "Substrate" shall mean any naturally occurring or artificial solid surface which is emersed or submerged in water.

## Chapter 1

- <u>067</u> "Surface Waters" shall mean all waters within the jurisdiction of this State, including all streams, lakes, ponds, impounding reservoirs, marshes, wetlands, watercourses, waterways, springs, canal systems, drainage systems, and all other bodies or accumulations of water, natural or artificial, public or private, situated wholly or partly within or bordering upon the State. Impounded waters in this definition do not include areas designated by the Department as wastewater treatment or wastewater retention facilities or irrigation reuse pits.
- <u>068</u> "Suspended Solids" shall mean substances such as clay, silt, organic detritus, plankton, or sand, which are held in suspension by water currents or which exist in suspension as colloids.
- <u>069</u> "Synergistic Effects" shall mean the cooperative action of discrete substances such that the cumulative effects are greater than the sum of the effects taken independently.
- <u>070</u> "Thermal Stratification" shall mean a characteristic of certain lakes in which distinct layers of water that differ in density exist because of temperature differences. These layers are resistant to mixing with each other.
- <u>071</u> "Thirty-Day Five-Year (30Q5) High Flow" shall mean the discharge at the five year recurrence interval determined from a frequency distribution of annual values of the highest average discharge for thirty consecutive days.
- 072 "Thirty-Day Five-Year (30Q5) Low Flow" shall mean the discharge at the five-year recurrence interval determined from a frequency distribution of annual values of the lowest average discharge for thirty consecutive days.
- <u>073</u> "Thirty-Day Mean" or "Thirty-Day Average" shall mean an average of the daily mean values calculated over a period of thirty consecutive days.
- <u>074</u> "Threatened Species" shall mean any aquatic species identified by the Nebraska Game and Parks Commission whose continued existence as a viable component of the wild fauna of the State appears likely to become endangered or which meets the criteria of for threatened species in the Federal Endangered Species Act.

## Chapter 1

<u>075</u> "Toxic Substances" shall mean those pollutants or combination of pollutants, radioactive substances, or disease causing agents, which after discharge and upon exposure, ingestion, inhalation or assimilation into organisms, either directly from the environment or indirectly by ingestion through food chains, will on the basis of information available to the Department cause either death, disease, behavioral abnormalities, cancer, genetic mutations, physiological malfunctions (including malfunction in reproduction) or physical deformations, on such organisms or their offspring.

<u>076</u> "Toxic Units (TU)" shall mean the reciprocal of the effluent dilution that produces the bioassay endpoint.

<u>077</u> "Twenty-four Hour Average" shall mean an average of at least two appropriately spaced measurements, as determined by the Department, calculated over a period of 24 consecutive hours.

<u>078</u> "Wastewater" shall mean water containing sewage, and/or industrial wastes, including, but not limited to, discharges from sand and gravel operations, cooling water, storm water, street and road runoff, return flow from irrigation, feedlot runoff, or wastes resulting from land erosion and other discharges, treated or untreated, which enter directly or indirectly into the waters of the State or to any storm sewer, and including the runoff from land used for the disposition of wastes.

<u>079</u> "Water Pollution" shall mean the manmade or man-induced alteration of the chemical, physical, biological, and radiological integrity of water.

## Chapter 1

<u>080</u> "Water Quality" shall mean the biological, chemical, physical, and radiological integrity of a body of water.

<u>080.01</u> "Biological Integrity" shall mean the plant, animal, and bacteriological species composition of a body of water.

<u>080.02</u> "Chemical Integrity" shall mean the chemical properties of the water, sediments, or biological organisms (e.g., concentrations in fish tissue) of a body of water.

<u>080.03</u> "Physical Integrity" shall mean the physical properties (e.g., temperature, turbidity, sedimentation) of a body of water.

<u>080.04</u> "Radiological Integrity" shall mean the radioactive properties of the water, sediments, or biological organisms (e.g., concentrations in fish tissue) of a body of water.

<u>081</u> "Water Quality Criteria" shall mean the elements of standards which are expressed as concentrations, levels, or narrative statements and represent the quality of water that is necessary to protect a beneficial use.

<u>082</u> "Wetland" shall mean those areas that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs, and similar areas.

<u>083</u> "Zone of Passage" shall mean the area or volume of a water body outside of any mixing zone or zones which provides a continuous water route for the free passage of swimming and drifting aquatic organisms such that there are no adverse effects to their populations.

Enabling Legislation: Neb. Rev. Stat. [[ 81-1502 and 81-1505(1)(2)

Legal Citation: Title 117, Ch. 1, Nebraska Department of Environmental Quality

#### NEBRASKA ADMINISTRATIVE CODE

## Title 117 - NEBRASKA DEPARTMENT OF ENVIRONMENTAL QUALITY

## Chapter 2 - APPLICATION OF STANDARDS

- <u>001</u> These standards shall apply at all times to all surface waters of the State except where noted below. Impounded waters designated by the Department as wastewater treatment facilities, wastewater retention facilities, or irrigation reuse pits are by definition (Chapter 1) not surface waters, thus standards do not apply to these waters.
- <u>002</u> The water quality criteria which may be necessary to protect downstream beneficial uses shall be applicable to all surface waters, whether or not those beneficial uses are assigned to a given water body in these Standards.
- 003 The application of standards for streams shall be in accordance with Chapters 3, 4, and 5.
- <u>004</u> The application of standards for lakes and impounded waters shall be in accordance with Chapters 3, 4, and 6. Lakes and impounded waters not identified in Chapter 6 shall be protected for the assigned beneficial uses of the stream segments (Chapter 5) on which they are located. Water quality criteria associated with such beneficial uses shall be applicable to these lakes and impounded waters. Lakes not identified in Chapter 6 that are not located on stream segments shall be protected in accordance with 009 of this chapter.
  - <u>004.01</u> In lakes and impoundments, or portions thereof, which exhibit natural thermal stratification, all applicable narrative and numerical criteria, with the exception of the numerical criteria for temperature, apply only to the epilimnion. Numerical temperature criteria apply at all depths (epilimnion, metalimnion, and hypolimnion) of lakes and impoundments exhibiting natural thermal stratification. In lakes and impoundments, or portions thereof, not exhibiting natural thermal stratification, the applicable narrative and numerical criteria apply at all depths.
- 005 The application of standards for wetlands shall be in accordance with Chapters 3 and 7.
- <u>006</u> These standards may be applied through Title 119 Rules and Regulations Pertaining to the Issuance of Permits Under the National Pollutant Discharge Elimination System and Title 120 Procedures Pursuant to Section 401 of the Federal Clean Water Act, 33 u.s.c. § 1251 et seq., for

Effective Date: July 31, 2006 2-1

## Chapter 2

Certification by the Department of Activities Requiring a Federal License or Permit which May Result in a Discharge.

<u>007</u> Narrative and numerical water quality criteria associated with aesthetics (Chapter 4, 005) and general criteria and acute toxicity criteria for protection of aquatic life (Chapter 4, 003) shall apply to all surface waters except as stated below in paragraphs 008, 010, 011, 012, and 013.

<u>008</u> These standards, except water quality criteria associated with aesthetics (Chapter 4, 005), will not apply to effluents and non-contact cooling water discharges, although these standards are used in deriving effluent limitations pursuant to Title 119 - Rules and Regulations Pertaining to the Issuance of Permits Under the National Pollutant Discharge Elimination System.

<u>009</u> These standards, except narrative and numerical water quality criteria associated with aesthetics (Chapter 4, 005) and general criteria and acute toxicity criteria for protection of aquatic life (Chapter 4, 003), will not apply to:

<u>009.01</u> Streams assigned a Coldwater Class A, Coldwater Class B, or Warmwater Class A Aquatic Life use during periods when the flow is less than 0.1 cfs or the 7-day 10-year low flow, unless an assigned beneficial use still exists under these conditions. Thirty-day average ammonia criteria will not apply to these streams during periods when the flow is less than 0.1 cfs or the 30-day 5-year low flow unless an assigned beneficial use still exists under these conditions.

<u>009.02</u> Streams assigned the Warmwater Class B Aquatic Life use during periods when the flow is less than 1.0 cfs, unless an assigned beneficial use still exists under this condition.

<u>009.03</u> Undesignated surface waters except as necessary to protect assigned downstream beneficial uses. Acute criteria which are applicable to these surface waters shall include those applicable for the Warmwater Class B Aquatic Life use.

<u>009.04</u> Streams during periods when the instantaneous flow is totally composed of effluent or non-contact cooling water discharges, excluding minor amounts of bank seepage, unless an assigned beneficial use still exists under these conditions.

<u>010</u> These standards, except water quality criteria associated with aesthetics (Chapter 4, 005) and recreation (Chapter 4, 002) will not apply within mixing zones unless specified below.

#### Chapter 2

Mixing zones for the initial assimilation of effluents or wastewaters may be necessary where discharges that have received the applicable level of treatment or control still do not adequately protect the water quality of a receiving stream. Mixing zones shall be limited to as small an area and volume of a receiving stream as is practical to prevent interference with or impairment of any beneficial uses. The requirements of mixing zones for heat shall be defined on a site-specific basis, in a manner consistent with Section 316 of the Clean Water Act.

<u>010.01</u> The Department shall determine the applicability of a mixing zone, and if applicable, the allowable size, location, water quality, and outfall design. The following requirements shall be used in defining all mixing zones. These requirements are not intended to define each individual mixing zone, but represent maximum limits which will satisfy most biological, chemical, physical, and radiological considerations. A smaller mixing zone may be required or no zone at all allowed, as necessary, in order to meet these requirements.

<u>010.02</u> The appropriateness, if any, of establishing a mixing zone for a pollutant which may be bioaccumulative, persistent, carcinogenic, mutagenic, or teratogenic shall be carefully evaluated by the Department. In such cases, effects such as potential ground water contamination, known or predicted safe exposure levels for human health, bioaccumulation in aquatic life, fish attraction, sediment deposition, and protection of downstream beneficial uses shall be considered.

<u>010.03</u> Mixing zones established for dissolved oxygen shall take into account the delayed effects caused by oxidation of organic matter and ammonia inside and outside the mixing zone. One-day minimum dissolved oxygen criteria shall apply at the boundary of and beyond acute mixing zones, but not within acute mixing zones. All applicable dissolved oxygen criteria, including the one-day minimum criteria, shall be met at and beyond the mixing zone boundaries.

<u>010.04</u> Mixing zones established for discharges impacting agricultural water supply criteria shall be based on the restrictions established for chronic mixing zones (010.06).

<u>010.05</u> All mixing zone specifications shall be based on critical conditions of minimum dilution. Flow variable calculations that use real-time flows for a point source discharge and receiving stream may be allowed to determine critical conditions of minimum dilution. If flow variable critical conditions are not defined, critical conditions shall be determined as follows. The average dry weather or seasonal flow for a point source discharge shall be used with the 7-day 10-year low flow of the receiving stream for

Effective Date: July 31, 2006 2-3

## Chapter 2

application of all criteria with the exception of thirty-day average ammonia criteria and acute criteria for aquatic life. The 30-day 5-year low flow of the receiving stream shall be used for application of thirty-day average ammonia criteria. The 1-day 10-year low flow of the receiving stream shall be used for application of acute criteria.

<u>010.06</u> Chronic Mixing Zones.

Chronic toxicity to aquatic life shall not be allowed at any time outside of a chronic mixing zone.

<u>010.06A</u> The length of a chronic mixing zone shall not exceed the following distances based on designated aquatic life use classes.

<u>010.06A1</u> Chronic mixing zones in Coldwater Class A, Coldwater Class B, and Warmwater Class B streams shall be designed to not exceed 2,500 feet in length.

<u>010.06A2</u> Chronic mixing zones in Warmwater Class A streams shall be designed to not exceed 5,000 feet in length.

<u>010.06B</u> Chronic mixing zones shall be located in a receiving stream in such a manner that the maintenance of aquatic life and other beneficial uses will not be adversely affected.

<u>010.06B1</u> A chronic mixing zone shall not overlap with any other mixing zone unless it is demonstrated to the satisfaction of the Department (e.g. aquatic field studies, bioassays in the site water using resident or acceptable nonresident aquatic species) that the overlapping of the mixing zones will not result in any adverse effects to aquatic life or other beneficial uses.

<u>010.06B2</u> Chronic mixing zones shall not at any time:

<u>010.06B2a</u> Extend across public drinking water supply intakes.

<u>010.06B2b</u> Extend across heavily-used or state designated recreation bathing areas.

## Chapter 2

<u>010.06B2c</u> Extend into publicly owned lakes and reservoirs listed in Chapter 6.

<u>010.06B2d</u> Significantly impact federally designated threatened or endangered aquatic species.

<u>010.06C</u> Water quality of chronic mixing zones.

The Department may suspend the applicability of all or part of the water quality criteria within a chronic mixing zone, except those criteria relating to aesthetics (Chapter 4, 005) and acute toxicity to aquatic life (Chapter 4, 003.01C). In streams designated a recreational use, criteria relating to recreation (Chapter 4, 002) shall also apply within a chronic mixing zone. Waters at and beyond chronic mixing zone boundaries shall meet all chronic water quality criteria associated with the receiving stream any time the receiving streamflow is equal to or greater than 0.1 cfs for streams assigned a Coldwater Class A, Coldwater Class B, or Warmwater Class A Aquatic Life use; 1.0 cfs for streams assigned the Warmwater Class B Aquatic Life use; or its 7-day 10-year low flow (30-day 5 year low flow in the case of thirty-day average ammonia criteria), whichever is greater. To prevent chronic toxicity in a stream, the following conditions shall be met.

 $\underline{010.06C1}$  The pollutant levels or concentrations of wastewaters which contain unknown or complex mixtures of potentially additive or synergistic toxic pollutants shall not exceed 1.0 chronic toxic units (TU<sub>c</sub>) based on chronic bioassays representing the effluent dilution received at the chronic mixing zone boundary.

<u>010.06C2</u> Where more than one wastewater discharge is located in a specific area and the potential exists for additive or synergistic effects, the pollutant levels or concentrations in water from a receiving stream outside any mixing zone shall not exceed 1.0 TU<sub>c</sub> based on chronic bioassays.

<u>010.06C3</u> Where a mixing zone is not allowed by the Department, the pollutant levels or concentrations of the wastewater in the outfall structure itself shall not exceed the No Observed Effect Level (NOEL) based on chronic bioassays of the undiluted effluent.

Effective Date: July 31, 2006 2-5

## Chapter 2

010.07 Acute Mixing Zones.

Acute toxicity to aquatic life shall not be allowed at any time outside of an acute mixing zone.

<u>010.07A</u> Acute mixing zones shall allow at all times for a continuous zone of passage in the receiving stream for the movement or drift of aquatic biota. To provide for a zone of passage, the width of an acute mixing zone at any transect of the receiving stream shall not exceed more than 1/2 of the stream width. Where more than one wastewater discharge is located in a specific area, acute mixing zones shall be located in such a manner as to provide for a continuous zone of passage of at least 1/2 the stream width.

<u>010.07B</u> The length of an acute mixing zone shall not exceed the following distances based on designated aquatic life use classes.

<u>010.07B1</u> Acute mixing zones in Coldwater Class A, Coldwater Class B, and Warmwater Class B streams shall be designed to not exceed 125 feet in length or 5 percent of the length of the chronic mixing zone whichever is more restrictive.

<u>010.07B2</u> Acute mixing zones in Warmwater Class A streams shall be designed to not exceed 250 feet in length or 5 percent of the length of the chronic mixing zone whichever is more restrictive.

<u>010.07C</u> Acute mixing zones shall be located in a receiving stream in such a manner that the maintenance of aquatic life and other beneficial uses will not be adversely affected. Acute mixing zones shall not at any time:

<u>010.07C1</u> Extend across public drinking water supply intakes.

<u>010.07C2</u> Extend across heavily-used or state designated recreation bathing areas.

 $\underline{010.07C3}$  Extend into publicly owned lakes and reservoirs listed in Chapter 6.

## Chapter 2

<u>010.07C4</u> Significantly impact federally designated threatened or endangered aquatic species.

 $\underline{010.07C5}$  Extend across the mouth of a classified tributary stream segment.

<u>010.07D</u> Water quality of acute mixing zones.

The Department may suspend the applicability of all or part of the water quality criteria within an acute mixing zone, except those criteria relating to aesthetics (Chapter 4, 005). In streams designated a recreational use, criteria relating to recreation (Chapter 4, 002) shall also apply within the acute mixing zone. Waters at and beyond acute mixing zone boundaries shall meet all acute water quality criteria associated with the receiving stream any time the receiving streamflow is equal to or greater than 0.1 cfs or its 1-day 10-year low flow.

 $\underline{010.07D1}$  The pollutant levels or concentrations of wastewaters which contain unknown or complex mixtures of potentially additive or synergistic toxic pollutants shall not exceed 0.3 acute toxic units (TU<sub>a</sub>) based on acute bioassays representing the effluent dilution received at the acute mixing zone boundary.

<u>010.07D2</u> Where more than one wastewater discharge is located in a specific area and the potential exists for additive or synergistic effects, the pollutant levels or concentrations in water from a receiving stream outside any acute mixing zone shall not exceed 0.3 TU<sub>a</sub> based on acute bioassays.

 $\underline{010.07D3}$  Where a mixing zone is not allowed by the Department, the pollutant levels or concentration of the wastewater in the outfall structure itself shall not exceed 0.3 TU<sub>a</sub> based on acute bioassays of the undiluted effluent.

<u>010.08</u> Mixing Zones for Public Drinking Water Supply Criteria.

In waters designated as Water Supplies for Public Drinking Water, the criteria for protection of public drinking water supplies shall not be exceeded at any time outside of a mixing zone for public drinking water supply criteria.

Effective Date: July 31, 2006 2-7

<u>010.08A</u> Mixing zones for public drinking water supply criteria shall be designed to not extend to within a 2 mile zone of influence from any public drinking water supply intake.

<u>010.08B</u> Mixing zones for public drinking water supply criteria shall be located in a receiving stream in such a manner that other beneficial uses will not be adversely affected.

<u>010.08C</u> Water quality of mixing zones for public drinking water supply criteria.

The Department may suspend the applicability of all or part of the water quality criteria for the protection of public drinking water supplies within a mixing zone for public drinking water supply criteria. Waters at and beyond boundaries of mixing zones for public drinking water supply criteria shall meet all public drinking water supply criteria any time the receiving stream is flowing equal to or greater than its 7-day 10-year low flow.

## 010.09 Outfall Design.

Prior to designating a mixing zone, the Department shall first approve pursuant to Title 123 - Rules and Regulations for Design, Operation, and Maintenance of Wastewater Treatment Works that the best practical engineering design for the outfall structure and its location and placement in the receiving stream have been applied, as necessary, to meet all mixing zone requirements for size, location, and water quality.

<u>010.09A</u> The following are acceptable circumstances for modifying the existing design, location, or placement of an outfall structure in a stream:

<u>010.09A1</u> Where high-rate diffusers or similar devices are required to: (1) minimize or prevent exposure of aquatic biota to acutely toxic conditions within an acute mixing zone, (2) minimize or prevent exposure of aquatic biota to possible irreversible chronic effects within a mixing zone where wastewaters tend to attract aquatic organisms, or (3) otherwise expedite mixing and dispersion of wastewaters in order to meet mixing zone requirements for size, location, and water quality.

<u>010.09A2</u> Where changes are required in the location of an outfall structure (e.g., upstream, downstream, or to the opposite stream bank) or

## Chapter 2

its placement (e.g., water depth, direction in relation to the stream current) in order to meet mixing zone requirements for size, location, and water quality.

<u>010.09B</u> Water turbulence created by high-rate diffusers or similar devices shall not be of such a magnitude that the movement or drift of aquatic biota within a zone of passage is interfered with or prevented.

- <u>011</u> Water quality criteria in Chapters 4 and 7 related to aquatic herbicides or algicides and their effects shall not apply to waters within canals, except those canals designated as segments in Chapter 5, during periods when these chemicals are applied by an irrigation district for the control of aquatic plants.
  - <u>011.01</u> All standards shall apply at all times to waters within canals designated as segments in Chapter 5.
  - <u>011.02</u> Discharges from canal to other surface waters of the State shall not, at any time, contain herbicides or algicides in amounts which are toxic to aquatic life.
- <u>012</u> Water quality criteria in Chapters 4 and 7 related to aquatic biocides (e.g., ichthyocides, algicides, herbicides) and their effects shall not apply to surface waters during periods when aquatic biocides are applied by an entity responsible for the management of a surface water body under the following conditions:
  - <u>012.01</u> Aquatic biocides shall be applied only for the purposes of attaining, maintaining, or enhancing beneficial uses identified in Chapters 4, 5, 6 and 7.
  - <u>012.02</u> Application of aquatic biocides shall not cause adverse impacts to any assigned beneficial uses of surface waters beyond the targeted surface water body.
  - <u>012.03</u> Application of aquatic biocides must be in accordance with the label restrictions and all applicable federal, state, and local laws or regulations.
  - <u>012.04</u> Entities responsible for the management of surface water bodies may include the Nebraska Game and Parks Commission, Natural Resources Districts, U.S. Fish and Wildlife Service, U.S. Forest Service, National Parks Service, U.S. Army Corps of Engineers, city governments, or any other entity responsible for managing the surface water body's assigned beneficial uses.

Effective Date: July 31, 2006 2-9

Chapter 2

<u>013</u> These standards will not apply to:

<u>013.01</u> Waters below existing hydroelectric plants during periods of approved sluicing activities, provided the hydroelectric plant was operational prior to May 10, 1982. The Department will determine when sluicing activities will be allowed.

<u>013.01A</u> Sluicing activities will be conducted in such a manner as to minimize any harmful effects on assigned beneficial uses.

<u>013.01B</u> Sluicing shall not occur immediately before or during critical reproductive periods of identified key species.

<u>013.01C</u> In the event that the sluicing activity has been determined to have a deleterious impact on the aquatic biota of the State waters, the operator shall pay to the Game and Parks Commission annually the lesser of A., \$5000.00, or B., 20% of the annual damages, which is the fair market mitigation to the fisheries resulting from the sluicing activity.

<u>013.02</u> Waters within canals designated as segments in Chapter 5 during periods of dewatering which are required for or may result from repair, maintenance, inspection, non-diversion periods, force majeure or public safety.

Enabling Legislation: Neb. Rev. Stat. § 81-1505(1)(2)

Legal Citation: Title 117, Ch. 2, Nebraska Department of Environmental Quality

## Title 117 - NEBRASKA DEPARTMENT OF ENVIRONMENTAL QUALITY

## Chapter 3 - ANTIDEGRADATION CLAUSE

<u>001</u> The water quality of surface waters, consistent with uses applied in these Standards, shall be maintained and protected. Water quality degradation which would adversely affect existing uses will not be allowed.

<u>002</u> State Resource Waters - Class A - These are surface waters, whether or not they are designated in these Standards, which constitute an outstanding State or National resource, such as waters within national or state parks, national forests or wildlife refuges, and waters of exceptional recreational or ecological significance. Waters which provide a unique habitat for federally designated endangered or threatened species and rivers designated under the Wild and Scenic Rivers Act are also included. The existing quality of these surface waters shall be maintained and protected.

<u>003</u> State Resource Waters - Class B - These are surface waters, whether or not they are designated in these Standards, which possess an existing quality which exceeds levels necessary to maintain recreational and/or aquatic life uses. The existing water quality of these surface waters shall be maintained and protected. However, the State may choose, in accordance with Neb. Rev. Stat. § 81-1513, to allow lower water quality as a result of important and necessary economic or social development in the area. There shall be achieved the highest statutory and regulatory requirements for all new and existing point sources and all cost-effective and reasonable best management practices for nonpoint source control. In cases where potential water quality impairment associated with a thermal discharge is involved, the method of implementation of this antidegradation policy shall be consistent with Section 316 of the Clean Water Act.

<u>004</u> In implementing this policy, the Department will follow the procedures outlined in the State's Continuing Planning Process.

Enabling Legislation: Neb. Rev. Stat. §§ 81-1501(1) and 81-1505(1)(2)

#### NEBRASKA ADMINISTRATIVE CODE

## Title 117 - NEBRASKA DEPARTMENT OF ENVIRONMENTAL QUALITY

Chapter 4 - STANDARDS FOR WATER QUALITY

<u>001</u> It is the public policy of the State of Nebraska to protect and improve the quality of surface water for human consumption, wildlife, fish and other aquatic life, industry, recreation, and other productive, beneficial uses.

Beneficial uses are assigned to surface waters within or bordering upon the State of Nebraska (Chapters 5 and 6). Assigned and existing beneficial uses are protected by the Antidegradation Clause (Chapter 3) and the narrative and numerical water quality criteria in this chapter. Beneficial uses are also protected by permits issued in accordance with the requirements of these standards, and through Department requirements for the applicable level of treatment or control for point and nonpoint sources of pollution. Some uses require higher quality water than others. When multiple uses are assigned to the same waters, all assigned uses will be protected.

The beneficial uses defined by these standards are:

**Primary Contact Recreation** 

Aquatic Life

Coldwater (Class A and B) Warmwater (Class A and B)

Water Supply

Public Drinking Water Agricultural Industrial

Aesthetics

These uses are not intended in any way to conflict with the quantitative beneficial uses provided for in Neb. Rev. Stat., Ch. 46, regulating irrigation or the authority of the Nebraska Department of Natural Resources.

Effective Date: July 31, 2006 4-1

Chapter 4

002 Primary Contact Recreation.

This use applies to surface waters which are used, or have a high potential to be used, for primary contact recreational activities. Primary contact recreation includes activities where the body may come into prolonged or intimate contact with the water, such that water may be accidentally ingested and sensitive body organs (e.g., eyes, ears, nose, etc.) may be exposed. Although the water may be accidentally ingested, it is not intended to be used as a potable water supply unless acceptable treatment is applied. These waters may be used for swimming, water skiing, canoeing, and similar activities. These criteria apply during the recreational period of May 1 through September 30.

002.01 E. coli.

*E. coli* bacteria shall not exceed a geometric mean of 126/100 ml. For increased confidence of the criteria, the geometric mean should be based on a minimum of five samples taken within a 30-day period. This does not preclude fecal coliform limitations based on effluent guidelines. The following single sample maxima shall be used solely for issuing periodic public advisories regarding use of waterbodies for Primary Contact Recreation.

002.01A 235/100 ml at designated bathing beaches.

002.01B 298/100 ml at moderately used recreational waters.

002.01C 406/100 ml at lightly used recreational waters.

002.01D 576/100 ml at infrequently used recreational waters.

003 Aquatic Life.

003.01 General Criteria for Aquatic Life

The following criteria apply to all aquatic life use classes.

#### Chapter 4

## 003.01A pH (Hydrogen Ion Concentration).

Hydrogen Ion concentrations, expressed as pH, shall be maintained between 6.5 and 9.0; unless pH values outside this range are due to natural conditions.

## <u>003.01B</u> Temperature.

The temperature of a receiving water shall not be increased by a total of more than 5°F (3°C) from natural background outside the mixing zone.

For the Missouri River, from the South Dakota-Nebraska state line near Ft. Randall Dam to Sioux City, Iowa, the maximum temperature limit is 85°F (29°C) with an allowable change of 4°F (2°C) from natural background. For cold waters, the maximum limit is 72°F (22°C) with an allowable change of 5°F (3°C) from natural background. For warm waters, the maximum limit is 90°F (32°C).

For impoundments, the temperature of the epilimnion of surface waters shall not be raised more than 3°F (2°C) above that which existed before the addition of heat of artificial origin. Unless a special study shows that the discharge of heated effluent into the hypolimnion will be desirable, such practice is not recommended and water for cooling should not be pumped from the hypolimnion to be discharged to the same body of water.

#### 003.01C Toxic Substances.

Surface waters shall be free from toxic substances, alone or in combination with other substances, in concentrations that result in acute or chronic toxicity to aquatic life, except as specified in Chapter 2. Toxic substances shall not be present in concentrations that result in objectionable tastes or significant bioaccumulation or biomagnification in aquatic organisms which renders them unsuitable or unsafe for consumption. (In implementing these criteria, the Department will follow procedures outlined in the State's Continuing Planning Process which comply with the federal water quality standards, 40 C.F.R. § 131.11 (1987)).

Effective Date: July 31, 2006

4-3

Title 117

<u>003.01C1</u> The following numerical criteria for the protection of aquatic life and their uses (e.g., fish consumption) shall not be exceeded. Unless otherwise noted, criteria are based on total concentrations.

|                           | CRITERIA (ug/l) CAS |                     |              |
|---------------------------|---------------------|---------------------|--------------|

<sup>&</sup>lt;sup>9</sup> Criteria for selenium apply to total recoverable concentrations

#### Chapter 4

003.01D Petroleum Oil.

Not to exceed 10 mg/l.

003.01E Total Dissolved Gases.

Not to exceed 110 percent of the saturation value for gases at the existing atmospheric and hydrostatic pressures.

003.01F Hydrogen Sulfide.

Not to exceed 0.002 mg/l as undissociated hydrogen sulfide.

<u>003.01G</u> Chloride.

Not to exceed 860 mg/l at any time or a four-day average concentration of 230 mg/l except as specified in 003.02B5b and 003.02B6a (Site-specific criteria).

003.01H Alkalinity

No less than 20 mg/l as CaCO<sub>3</sub> except where natural background is less.

003.011 Residual Chlorine.

<u>003.0111</u> One-hour average concentration not to exceed 19 ug/l.

<u>003.0112</u> Four-day average concentration not to exceed 11 ug/l.

003.01J Biological Criteria.

Any human activity causing water pollution which would significantly degrade the biological integrity of a body of water or significantly impact or displace an identified "key species" shall not be allowed except as specified in Chapter 2.

## Chapter 4

# 003.01J1 Key Species.

Key species are identified endangered, threatened, sensitive, or recreationally-important aquatic species. Key species are designated by stream segment (Chapter 5). The following list defines the aquatic species considered by the Department to be key species.

#### **COMMON NAME SCIENTIFIC NAME**

# **Endangered Species:**

Pallid sturgeon Scaphirhynchus albus Topeka shiner Notropis topeka Macrhybopsis gelida Sturgeon chub Blacknose shiner Notropis heterolepis Scaleshell mussel Leptodea leptodon

# **Threatened Species:**

Lake sturgeon Acipenser fulvescens

Northern redbelly dace Phoxinus eos

Finescale dace Phoxinus neogaeus

# Sensitive Species<sup>1</sup>:

Lake chub Couesius plumbeus Brook stickleback Culea inconstans Iowa darter Etheostoma exile Johnny darter Etheostoma nigrum Orangethroat darter Etheostoma spectabile Blacknose dace Rhinichthys atratulus Pearl Dace Semotilus margarita Grass pickerel Esox americanus Pumpkinseed Lepomis gibbosus Golden shiner Notemigonus crysoleucas

Common shiner Notropis cornutus

<sup>1</sup> Endangered, threatened, and recreationally-important aquatic species are not included.

# Chapter 4

# <u>COMMON NAME</u> <u>SCIENTIFIC NAME</u>

# **Recreationally-Important Species:**

Shovelnose sturgeon Scaphirhynchus platorynchus

Paddlefish Polyodon spathula Brook trout Salvelinus fontinalis

Brown trout Salmo trutta

Rainbow trout Oncorhynchus mykiss

Northern pike Esox lucius

Muskellunge Esox masquinongy Blue catfish Ictalurus furcatus\_ Channel catfish Ictalurus punctatus Flathead catfish Pylodictis olivaris Striped bass Morone saxatilis White bass Morone chrysops Rock bass Ambloplites rupestris Largemouth bass Micropterus salmoides Smallmouth bass Micropterus dolomieui Spotted bass Micropterus punctulatus Redear sunfish Lepomis microlophus Bluegill Lepomis macrochirus Black crappie Pomoxis nigromaculatus

White crappie Pomoxis annularis
Yellow perch Perca flavescens

Sauger Stizostedion canadense
Walleye Stizostedion vitreum vitreum

Effective Date: July 31, 2006

Chapter 4

<u>003.02</u> Site-Specific Criteria for Aquatic Life.

<u>003.02A</u> Procedures for Developing Site-specific Water Quality Criteria.

The water quality criteria in Chapter 4 may not always reflect the toxicity of a chemical in a specific water body. These criteria also represent only a limited number of the natural and manmade chemicals that exist in the environment which may pose a threat to aquatic life. Thus, it may be necessary in some water bodies to develop new water quality criteria or modify existing criteria through site-specific analyses in order to more accurately protect the resident species.

<u>003.02A1</u> The following are acceptable conditions for developing sitespecific criteria.

<u>003.02A1a</u> Resident species of a water body are more or less sensitive than those species used to develop a water quality criterion.

<u>003.02A1a(1)</u> Natural adaptive processes have enabled a viable, balanced aquatic community to exist in waters where natural background levels of a chemical exceed the criterion (e.g., resident species have evolved a genetically-based greater resistance to high concentrations of a chemical).

<u>003.02A1a(2)</u> The composition of aquatic species in a water body is different from those used in deriving a criterion (e.g., most of the species considered among the most sensitive, such as salmonids or the cladoceran, Daphnia magna, which were used in developing a criterion, are absent from a water body).

<u>003.02A1b</u> Biological availability and/or toxicity of a chemical may be altered due to differences between the physical and/or chemical characteristics of the water in a water body and the laboratory water used in developing a criterion (e.g., alkalinity, hardness, pH, salinity, suspended solids, turbidity, water temperature).

# Chapter 4

<u>003.02A1b(1)</u> The effect of seasonality on the physical and/or chemical characteristics of a water body and subsequent effects on biological availability and/or toxicity of a chemical may justify seasonally dependent sitespecific criteria.

<u>003.02A2</u> To insure that the approach to be used in developing site-specific criteria is acceptable, the Department should be involved early in the planning of any site-specific analyses so that an agreement can be reached concerning the availability of existing data, additional data needs, methods to be used in generating new data, testing procedures to be used, schedules to be followed, and quality control and assurance provisions to be used. It is particularly important to involve the Department in the planning of site-specific analyses if a party other than the Department will be conducting the data generation and testing.

<u>003.02A3</u> Site-specific criteria shall protect all life stages of resident species year-round (or seasonally for seasonally dependent criteria) and prevent acute and chronic toxicity in all parts of a water body. If site-specific criteria are seasonally dependent, the period when the criteria apply shall be clearly identified.

<u>003.02A4</u> Site-specific criteria shall include both chronic and acute concentrations to better reflect the different tolerances of resident species to the inherent variability between concentrations and toxicological characteristics of a chemical.

003.02A5 Site-specific criteria shall be clearly identified as maximum "not to be exceeded" or average values, and if an average, the averaging period. The conditions, if any, when the criteria apply shall be clearly stated (e.g., specific levels of hardness, pH, or water temperature). Specific sampling requirements (e.g., location, frequency), if any, shall also be identified.

<u>003.02A6</u> The following are acceptable procedures for developing sitespecific criteria.

# Chapter 4

<u>003.02A6a</u> Site-specific analyses for the development of new water quality criteria shall be conducted in a manner which is scientifically justifiable and consistent with the assumptions and rationale in Guidelines for Deriving Numerical National Water Quality Criteria for the Protection of Aquatic Organisms and their Uses, EPA, 1985.

<u>003.02A6b</u> Site-specific analyses for the modification of existing water quality criteria shall be conducted in accordance with one of the following procedures. These procedures are described in Water Quality Standards Handbook, EPA, December 1983.

<u>003.02A6b(1)</u> Recalculation procedure. This procedure is used to account for differences in sensitivity to a chemical between resident species and those species used in deriving the criterion. Bioassays in laboratory water may be required for untested resident species. Adaptation of numerical toxics criteria to site-specific conditions is explained in Recalculation of State Toxic Criteria, EPA, November 1983.

<u>003.02A6b(2)</u> Indicator species procedure. This procedure is used to account for differences in biological availability and/or toxicity of a chemical between the physical and/or chemical characteristics of the water in a water body and the laboratory water used in developing the criterion. Bioassays in site water using resident species or acceptable nonresident species are required. Reconditioned laboratory water simulating site-specific water quality conditions is an acceptable substitute for site water.

<u>003.02A6b(3)</u> Resident species procedure. This procedure is used to account for differences in both resident species sensitivity and biological availability and/or toxicity of a chemical. Bioassays in site water using resident species are required. Reconditioned laboratory water simulating site-specific water quality conditions is an acceptable substitute for site water.

## Chapter 4

<u>003.02A6b(4)</u> Other scientifically defensible procedures such as relevant aquatic field studies, laboratory tests, or available scientific literature.

<u>003.02A6b(4)(a)</u> Deviations from EPA procedures shall have justifications which are adequately documented and based on sound scientific rationale.

<u>003.02A6b(4)(b)</u> The data, testing procedures, and application (safety) factors used to develop site-specific criteria shall reflect the nature of the chemical (e.g., persistency, bioaccumulation potential, and avoidance or attraction responses in fish) and the most sensitive resident species of a water body.

<u>003.02A7</u> A site may be limited to the specific area affected by a point or nonpoint source of pollution; or, if water quality effects on toxicity are not a consideration, the site may be as large as a general biogeographical area permits (e.g., ecoregion, river basin, subbasin). For a number of different water bodies to be designated as one site, their respective aquatic communities cannot vary substantially in sensitivity to a chemical.

Effective Date: July 31, 2006

## Chapter 4

<u>003.02B</u> Site-Specific Water Quality Criteria.

003.02B1 Lake Ogallala (Keith County).

<u>003.02B1a</u> Dissolved Oxygen.

The following criteria shall apply from July 1 through October 15 as specified below. When the Kingsley Hydropower Plant is in operation (generating electricity), these criteria are based on water temperature measurements taken continuously and averaged every hour in the power house of the Kingsley Hydropower Plant and on dissolved oxygen measurements taken continuously and averaged every 10 minutes from Lake Ogallala at the midpoint of the buoy line (1987 location at the outer edge of the stilling basin) at a one meter depth. For purposes of calculating seven-day mean, sevenday mean minimum, and thirty-day mean values at the buoy line, seven-day and thirty-day calculation periods shall be based on a sequence of days not to include any day in which the Kingsley Hydropower Plant is not in operation. The following criteria may also be based on temperature and dissolved oxygen measurements taken from Lake Ogallala at any location except the metalimnion and hypolimnion when the lake exhibits thermal stratification.

<u>003.02B1a(1)</u> When daily mean water temperatures are 18°C or less the following criteria shall apply:

 $\underline{003.02B1a(1)(a)}$  One-day minimum of not less than 3.0 mg/l.

<u>003.02B1a(1)(b)</u> Daily mean of not less than 4.0 mg/l and no more than 20 percent of the one-day mean values shall be less than 4.2 mg/l.

 $\underline{003.02B1a(1)(c)}$  Seven-day mean of not less than 4.3 mg/l.

# Chapter 4

003.02B1a(2) When daily mean water temperatures exceed 18°C for four consecutive days of operation, the following criteria shall apply for as long as daily mean water temperatures continue to exceed 18°C. These criteria take effect on the fifth day of daily mean water temperatures exceeding 18°C.

<u>003.02B1a(2)(a)</u> One-day minimum of not less than 4.0 mg/l.

 $\underline{003.02B1a(2)(b)}$  Daily mean of not less than 5.0 mg/l.

<u>003.02B1a(3)</u> When daily mean water temperatures exceed 18°C for fifteen consecutive days of operation, or when daily mean water temperatures exceed 20°C the dissolved oxygen criteria for Class B - Coldwater Aquatic Life (Chapter 4, 003.03B1) shall apply for as long as daily mean water temperatures continue to exceed 18°C. These criteria take effect on the sixteenth day of daily mean water temperatures exceeding 18°C or on the first day after daily mean water temperatures exceed 20°C.

<u>003.02B1a(4)</u> In implementing paragraphs 003.02B1a(2) and 003.02B1a(3), if an interruption in the operation of Kingsley Hydropower Plant exceeding 24 hours occurs during the count of days leading to a change in criteria, the count of days shall be suspended until the plant is back in operation. The first new day of operation shall be counted as the next consecutive day in the original count of days.

<u>003.02B1b</u> Dissolved oxygen criteria for Class B - Coldwater Aquatic Life (Chapter 4, 003.03B1) shall apply during the period of October 16 through June 30.

## Chapter 4

<u>003.02B2</u> Platte River - Confluence of North and South Platte Rivers to Missouri River (segments MP1-10000, MP1-20000, MP2-10000, MP2-20000, MP2-30000, and MP2-40000, Middle Platte River Basin; segments LP1-10000 and LP1-20000, Lower Platte River Basin); Salt Creek - Hickman Branch to Beal Slough (segment LP2-30000, Lower Platte River Basin); Wood River - Grand Island Utilities Ditch to Platte River (segment MP2-10100, Middle Platte River Basin); Loup River - Loup River Canal Diversion to Platte River (segments LO1-10000 and LO1-20000, Loup River Basin); and Republican River - Frenchman Creek to Nebraska-Kansas border (Sec 32-1N-6W) (segments RE1-10000, RE1-20000, RE1-30000, RE1-40000, RE1-50000, RE2-10000, RE3-10000, and RE3-20000, Republican River Basin).

003.02B2a Total Ammonia (as nitrogen).

<u>003.02B2a(1)</u> One-hour average concentration in mg/l not to exceed the numerical value given by

$$AV = \left(8.54 \left( \frac{0.0489}{1 + 10^{7.204 - pH}} + \frac{6.95}{1 + 10^{pH - 7.204}} \right)$$

# Chapter 4

<u>003.02B2a(1)(a)</u> The following table shows one-hour average criteria for total ammonia at various pHs.

| pН  | Total   |
|-----|---------|
|     | Ammonia |
|     | mg/l    |
| 6.6 | 47.61   |
| 6.8 | 42.68   |
| 7.0 | 36.68   |
| 7.2 | 30.02   |
| 7.4 | 23.35   |
| 7.6 | 17.31   |
| 7.8 | 12.34   |
| 8.0 | 8.54    |
| 8.2 | 5.82    |
| 8.4 | 3.95    |
| 8.6 | 2.69    |
| 8.8 | 1.87    |
| 9.0 | 1.35    |

# Chapter 4

<u>003.02B2a(2)</u> Thirty-day average concentration in mg/l not to exceed the numerical value given by

$$CV = CCC \left( \frac{0.0676}{1 + 10^{7.688 - pH}} + \frac{2.91}{1 + 10^{pH - 7.688}} \right)$$

where Temp is °C and:

CCC = 
$$0.854$$
 (Minimum of  $\{2.85, \text{ or } 1.45 \cdot 10^{0.028(25 - \text{Temp})}\}\)$ 

during periods when early life stages are present (March through October), or

$$CCC = 0.854 \bigg(1.45 \cdot 10^{0.028 \left(25 \text{ - Maximum of } \left\{\text{Temp, or } 7\right\}\right)}\bigg)$$

during periods when early life stages are absent (November through February.

<u>003.02B2a(2)(a)</u> The highest four-day average concentration within a thirty-day period shall not exceed 2.5 times the thirty-day criterion.

003.02B2a(2)(b) The following table shows thirty-day average criteria for total ammonia at various temperatures and pHs for periods when early life stages are present (March through October) and when early life stages are absent (November through February).

# THIRTY-DAY AVERAGE CRITERIA FOR TOTAL AMMONIA (mg/l)

Italicized numbers in parentheses apply when Early Life Stages are Absent (November through February). Early Life Stage Absent criteria are identical to Early Life Stages Present criteria at temperatures greater than 14.5°C.

|            |      |         |         |        |        |        |        | pН     |        |        |        |        |        |        |

| 7.8 | 14.32   |
| 8.0 | 9.92    |
| 8.2 | 6.75    |
| 8.4 | 4.58    |
| 8.6 | 3.13    |
| 8.8 | 2.18    |
| 9.0 | 1.56    |

## Chapter 4

<u>003.02B3a(2)</u> Thirty-day average concentration in mg/l not to exceed the numerical value given by

$$CV = CCC \left( \frac{0.0676}{1 + 10^{7.688 - pH}} + \frac{2.91}{1 + 10^{pH - 7.688}} \right)$$

where Temp is °C and:

CCC = 
$$0.854$$
 (Minimum of  $\{2.85, \text{ or } 1.45 \cdot 10^{0.028(25 - \text{Temp})}\}\)$ 

during periods when early life stages are present (March through October), or

$$CCC = 0.854 \left(1.45 \cdot 10^{0.028 \left(25 \text{ - Maximum of } \left\{\text{Temp, or } 7\right\}\right)}\right)$$

during periods when early life stages are absent (November through February.

<u>003.02B3a(2)(a)</u> The highest four-day average concentration within a thirty day period shall not exceed 2.5 times the thirty-day criterion.

003.02B3a(2)(b) The following table shows thirty-day average criteria for total ammonia at various temperatures and pHs for periods when early life stages are present (March through October) and when early life stages are absent (November through February).

Italicized numbers in parentheses apply when Early Life Stages are Absent (November through February). Early Life Stage Absent criteria are identical to Early Life Stages Present criteria at temperatures greater than 14.5°C.

## Chapter 4

<u>003.02B4a(2)</u> Thirty-day average concentration in mg/l not to exceed the numerical value given by

$$CV = CCC \left( \frac{0.0676}{1 + 10^{7.688 - pH}} + \frac{2.91}{1 + 10^{pH - 7.688}} \right)$$

where Temp is °C and:

CCC = 
$$0.854$$
 (Minimum of  $\{2.85, \text{ or } 1.45 \cdot 10^{0.028(25 - \text{Temp})}\}\)$ 

during periods when early life stages are present (March through October), or

$$CCC = 0.854 \bigg(1.45 \cdot 10^{0.028 \left(25 \text{ - Maximum of } \left\{\text{Temp, or } 7\right\}\right)}\bigg)$$

during periods when early life stages are absent (November through February.

<u>003.02B4a(2)(a)</u> The highest four-day average concentration within a thirty-day period shall not exceed 2.5 times the thirty-day criterion.

003.02B4a(2)(b) The following table shows thirty-day average criteria for total ammonia at various temperatures and pHs for periods when early life stages are present (March through October) and when early life stages are absent (November through February).

Chapter 4

# THIRTY-DAY AVERAGE CRITERIA FOR TOTAL AMMONIA (mg/l)

Italicized numbers in parentheses apply when Early Life Stages are Absent (November through February). Early Life Stage Absent criteria are identical to Early Life Stages Present criteria at temperatures greater than 14.5°C.

## Chapter 4

# 003.02B5b Chloride.

Because these segments have high natural background concentrations of chloride and aquatic life has adapted to these conditions, criteria shall be based on natural background values.

003.02B6 Rock Creek (segments LP2-11000, LP2-11100, and LP2-11200, North Fork Rock Creek (segment LP2-11010), Ash Hollow Creek (segment LP2-11110), Little Rock Creek (segment LP2-11120), Jordan Creek (segment LP2-20100), Little Salt Creek (segment LP2-20300), Oak Creek - Elk Creek to Salt Creek (segment LP2-20500), Middle Creek - South Branch Middle Creek to Salt Creek (segment LP2-21000), Haines Branch - Holmes Creek to Salt Creek (segment 21200), and Holmes Creek (segment LP2-21210). All segments are within the Lower Platte River Basin.

# <u>003.02B6a</u> Chloride.

Because these segments have high natural background concentrations of chloride and aquatic life has adapted to these conditions, criteria shall be based on natural background values.

Effective Date: July 31, 2006

# Chapter 4

003.03 Coldwater Aquatic Life Use Class Specific Criteria.

These are waters which provide, or could provide, a habitat consisting of sufficient water volume or flow, water quality, and other characteristics such as substrate composition which are capable of maintaining year-round populations of coldwater biota. Coldwater biota are considered to be life forms in waters where temperatures seldom exceed 25°C (77°F).

## 003.03A Class A - Coldwater.

These waters provide a habitat which supports natural reproduction of a salmonid (trout) population. These waters also are capable of maintaining year-round populations of a variety of other coldwater fish and associated vertebrate and invertebrate organisms and plants.

# 003.03A1 Dissolved Oxygen.

<u>003.03A1a</u> One-day minimum of not less than 8.0 mg/l for salmonid early-life stages. This criterion applies from October 1 through May 31.

<u>003.03A1b</u> One-day minimum of not less than 4.0 mg/l for all life stages other than salmonid early-life stages. This criterion applies from June 1 through September 30.

<u>003.03A1c</u> Seven-day mean minimum of not less than 5.0 mg/l. This criterion applies from June 1 through September 30.

<u>003.03A1d</u> Seven-day mean of not less than 9.5 mg/l for salmonid early-life stages. This criterion applies from October 1 through May 31.

<u>003.03A1e</u> Thirty-day mean of not less than 6.5 mg/l. This criterion applies from June 1 through September 30.

# Chapter 4

# 003.03A2 Total Ammonia (as nitrogen).

 $\underline{003.03A2a}\,$  One-hour average concentration in mg/l not to exceed the numerical value given by

$$AV = (5.62) \left( \frac{0.0489}{1 + 10^{7.204 - pH}} + \frac{6.95}{1 + 10^{pH - 7.204}} \right)$$

 $\underline{003.03A2a(1)}$  The following table shows one-hour average criteria for total ammonia at various pHs.

| рН  | Total   |
|-----|---------|
|     | Ammonia |

## Chapter 4

003.04 Warmwater Aquatic Life Use Class Specific Criteria.

These are waters which provide, or could provide, a habitat consisting of sufficient water volume or flow, water quality, and other characteristics such as substrate composition which are capable of maintaining year-round populations of warmwater biota. Warmwater biota are considered to be life forms in waters where temperatures frequently exceed 25°C (77°F).

## 003.04A Class A - Warmwater.

These waters provide, or could provide, a habitat suitable for maintaining one or more identified key species on a year-round basis. These waters also are capable of maintaining year-round populations of a variety of other warmwater fish and associated vertebrate and invertebrate organisms and plants.

# 003.04A1 Dissolved Oxygen.

<u>003.04A1a</u> One-day minimum of not less than 5.0 mg/l for early-life stages. This criterion applies from April 1 through September 30.

<u>003.04A1b</u> One-day minimum of not less than 3.0 mg/l for all life stages other than early-life stages. This criterion applies from October 1 through March 31.

<u>003.04A1c</u> Seven-day mean minimum of not less than 4.0 mg/l. This criterion applies from October 1 through March 31.

<u>003.04A1d</u> Seven-day mean of not less than 6.0 mg/l for early-life stages. This criterion applies from April 1 through September 30.

<u>003.04A1e</u> Thirty-day mean of not less than 5.5 mg/l. This criterion applies from October 1 through March 31.

# Chapter 4

# 003.04A2 Total Ammonia (as nitrogen).

 $\underline{003.04A2a}$  One-hour average concentration in mg/l not to exceed the numerical value given by

$$AV = (8.40) \left( \frac{0.0489}{1 + 10^{7.204 - pH}} + \frac{6.95}{1 + 10^{pH - 7.204}} \right)$$

 $\underline{003.04A2a(1)}$  The following table shows one-hour average criteria for total ammonia at various pHs.

| рН  | Total   |
|-----|---------|
|     | Ammonia |
|     | mg/l    |
| 6.6 | 46.83   |
| 6.8 | 41.98   |
| 7.0 | 36.08   |

#### Chapter 4

#### 003.04B Class B - Warmwater.

These are waters where the variety of warmwater biota is presently limited by water volume or flow, water quality (natural or irretrievable human-induced conditions), substrate composition, or other habitat conditions. These waters are only capable of maintaining year-round populations of tolerant warmwater fish and associated vertebrate and invertebrate organisms and plants. Key species may be supported on a seasonal or intermittent basis (e.g., during high flows) but year-round populations cannot be maintained.

#### 003.04B1 Dissolved Oxygen.

<u>003.04B1a</u> One-day minimum of not less than 5.0 mg/l for early-life stages. This criterion applies from April 1 through September 30.

<u>003.04B1b</u> One-day minimum of not less than 3.0 mg/l for all life stages other than early-life stages. This criterion applies from October 1 through March 31.

<u>003.04B1c</u> Seven-day mean minimum of not less than 4.0 mg/l. This criterion applies from October 1 through March 31.

<u>003.04B1d</u> Seven-day mean of not less than 6.0 mg/l for early-life stages. This criterion applies from April 1 through September 30.

<u>003.04B1e</u> Thirty-day mean of not less than 5.5 mg/l. This criterion applies from October 1 through March 31.

Effective Date: July 31, 2006

### Chapter 4

### 003.04B2 Total Ammonia (as nitrogen).

<u>003.04B2a</u> One-hour average concentration in mg/l not to exceed the numerical value given by

$$AV = (9.91) \left( \frac{0.0489}{1 + 10^{7.204 - pH}} + \frac{6.95}{1 + 10^{pH - 7.204}} \right)$$

 $\underline{003.04B2a(1)}$  The following table shows one-hour average criteria for total ammonia at various pHs.

| рН  | Total   |
|-----|---------|

#### Chapter 4

#### 003.05 Nutrient Criteria for Lakes and Impounded Waters.

The following criteria associated with various nutrient classifications shall apply to lakes or impounded waters according to codes listed in Chapter 6. Where no classification has been specified for a lake or impounded water, criteria associated with the statewide default classification shall apply. Criteria are based on seasonal averages from April 1 through September 30.

| Lake or Impounded V |            | <b>Total Phosphorus</b> | Total Nitrogen | Chlorophyll a |
|---------------------|------------|-------------------------|----------------|---------------|
| Classification: Co  | des        | (ug/l)                  | (ug/l)         | (ug/l)        |

#### Chapter 4

#### 004 Water Supply.

#### 004.01 Public Drinking Water.

These are surface waters which serve as a public drinking water supply. These waters must be treated (e.g., coagulation, sedimentation, filtration, chlorination) before the water is suitable for human consumption. After treatment, these waters are suitable for drinking water, food processing, and similar uses.

#### 004.01A General Criteria.

Wastes or toxic substances introduced directly or indirectly by human activity in concentrations that would degrade the use (i.e., would produce undesirable physiological effects in humans) shall not be allowed.

#### 004.01B Numerical Criteria.

Numerical criteria for the parameters listed below shall not be exceeded. Any substance introduced directly or indirectly by human activity shall not be allowed to enter surface water if one or more of the following numerical standards would be exceeded. The numerical standards listed below are intended to protect beneficial use of public drinking water supply. If the natural background level of a parameter is greater than the numerical standard, this shall not in and of itself prohibit the use of the surface water. If the natural background level of a parameter is greater than the numerical standard listed below, the background level shall be used in place of the numerical criteria.

Effective Date: July 31, 2006

<sup>&</sup>lt;sup>a</sup> Human health criteria based on the consumption of water, fish and other aquatic organisms

b Human health criteria at the 10<sup>-5</sup> risk level for carcinogens based on the consumption of water, fish and other aquatic organisms

#### Chapter 4

#### 004.02 Agricultural.

004.02A General Criteria.

Wastes or toxic substances introduced directly or indirectly by human activity in concentrations that would degrade the use (i.e., would produce undesirable physiological effects in crops or livestock) shall not be allowed.

004.02B Class A - Agricultural.

These are waters used for general agricultural purposes (e.g., irrigation and livestock watering) without treatment.

004.02B1 Conductivity.

Not to exceed 2,000 umhos/cm between April 1 and September 30.

004.02B2 Nitrate and Nitrite as Nitrogen.

Not to exceed 100 mg/l.

004.02B3 Selenium.

Not to exceed 0.02 mg/l.

004.02C Class B - Agricultural.

These are waters where the natural background water quality limits its use for agricultural purposes. No water quality criteria are assigned to protect this use.

004.03 Industrial.

These are waters used for commercial or industrial purposes such as cooling water, hydroelectric power generation, or nonfood processing water; with or without treatment. Water quality criteria to protect this use will vary with the type of industry involved. Where water quality criteria are necessary to protect this use, site-specific criteria will be developed.

Effective Date: July 31, 2006

Chapter 4

005 Aesthetics.

This use applies to all surface waters of the state. To be aesthetically acceptable, waters shall be free from human-induced pollution which causes: 1) noxious odors; 2) floating, suspended, colloidal, or settleable materials that produce objectionable films, colors, turbidity, or deposits; and 3) the occurrence of undesirable or nuisance aquatic life (e.g., algal blooms). Surface waters shall also be free of junk, refuse, and discarded dead animals.

Enabling Legislation: Neb. Rev. Stat. §§ 81-1505(1)(2)

#### NEBRASKA ADMINISTRATIVE CODE

#### Title 117 - NEBRASKA DEPARTMENT OF ENVIRONMENTAL QUALITY

#### Chapter 5 - STREAM CLASSIFICATION BY BASIN

<u>001</u> Maps showing the location of each stream segment are included with the basin tables.

<u>002</u> Beneficial uses are assigned to each designated segment in the basin tables. The water quality criteria in Chapter 4 associated with the assigned uses are applicable to each segment. These criteria are also applicable to segment tributaries, as necessary, to protect a segment's assigned uses if the tributary is not a designated segment. Assigned uses also apply to lakes and impounded waters located on designated segments unless those lakes or impounded waters are identified in Chapter 6. Lakes and impounded waters referenced in this Chapter are protected for beneficial uses as listed in Chapter 6.

<u>003</u> The following species codes are used in the basin tables to identify the key species which typically occur in a stream segment.

| Species Code | Common Name            |
|--------------|------------------------|
| 1            | Lake sturgeon          |
| 2            | Pallid sturgeon        |
| 3            | Northern redbelly dace |
| 4            | Pearl dace             |
| 5            | Finescale dace         |
| 6            | Blacknose shiner       |
| 7            | Lake chub              |
| 8            | Brook Stickleback      |
| 9            | Iowa darter            |
| 10           | Johnny darter          |
| 11           | Orangethroat darter    |
| 12           | Blacknose dace         |
| 13           | Grass pickerel         |
| 14           | Pumpkinseed            |
| 15           | Golden shiner          |
| 16           | Common shiner          |
| 17           | Topeka shiner          |
|              |                        |

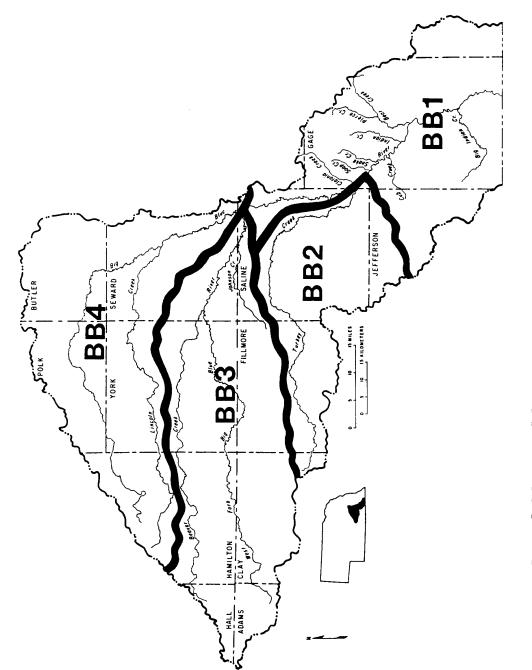

Effective Date: July 31, 2006 5-1

## Chapter 5

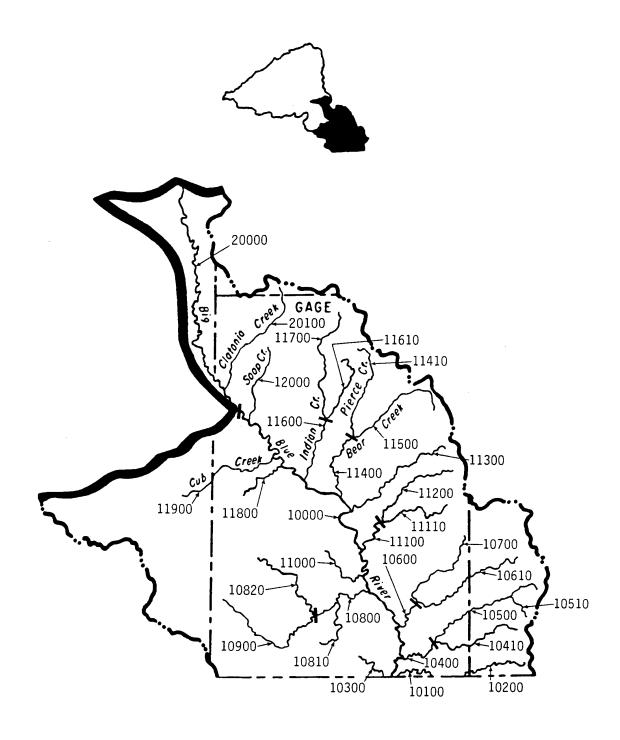

| Species Code | Common Name         |

Chapter 5

Enabling Legislation: Neb. Rev. Stat. [81-1505(1)(2)

Legal Citation: Title 117, Ch. 5, Nebraska Department of Environmental Quality

#### NEBRASKA ADMINISTRATIVE CODE

### Title 117 - NEBRASKA DEPARTMENT OF ENVIRONMENTAL QUALITY

### Chapter 6 - LAKES AND IMPOUNDED WATERS

<u>001</u> Lakes and impounded waters are classified by river basins. These waters shall be protected for the beneficial uses as assigned in paragraph 005.

<u>002</u> Application of Standards to Lakes and Impoundments.

In lakes and impoundments, or portions thereof, which exhibit natural thermal stratification, all applicable narrative and numerical criteria, with the exception of the numerical criteria for temperature, apply only to the epilimnion. Numerical temperature criteria apply at all depths (epilimnion, metalimnion, and hypolimnion) of lakes and impoundments exhibiting natural thermal stratification. In lakes and impoundments, or portions thereof, not exhibiting natural thermal stratification, the applicable narrative and numerical criteria apply at all depths.

## 003 Management Procedures:

Areas listed in this Chapter may or may not be managed for swimming. The Department of Environmental Quality advises checking with the management agency or abiding by the Rules and Regulations posted in the area before using the water for recreational activities.

<u>004</u> No discharge of wastewater from domestic, municipal, or industrial sources shall be allowed directly into lakes or impounded waters except:

<u>004.01</u> Wastewater from sources authorized by NPDES permits to discharge to these waters prior to May 10, 1982 which have operated under active NPDES permits since then.

<u>004.02</u> Noncontact cooling waters from sources authorized by NPDES permits to discharge to these waters.

<u>004.03</u> Stormwater from sources authorized by NPDES permits to discharge to these waters.

Effective Date: July 31, 2006 6-1

## Title 117

# Chapter 6

<u>005</u> The following lakes and impounded waters shall be protected for the beneficial uses as noted in the tables below (SRA refers to State Recreation Area, WMA refers to Wildlife Management Area, SWA refers to State Wayside Area, NWR refers to National Wildlife Refuge).

Legal Citation: Title 117, Ch. 6, Nebraska Department of Environmental Quality

#### NEBRASKA ADMINISTRATIVE CODE

## Title 117 - NEBRASKA DEPARTMENT OF ENVIRONMENTAL QUALITY

## Chapter 7 - WATER QUALITY STANDARDS FOR WETLANDS

<u>001</u> Wetlands serve a multitude of important functions which include, but are not limited to, providing habitat for aquatic life and other wildlife, food production, stormwater control and flood attenuation, erosion control, shoreline stabilization, nonpoint source runoff filtration, groundwater recharge, and aesthetics. Wetlands are characterized by extreme variations in hydrology, soils, vegetation, water quality, and biotic assemblages. The dynamic nature of wetlands requires standards which recognize their variability of natural water quality both through time at individual sites and between sites across the State. Wetland classifications, beneficial uses, and water quality criteria contained in this chapter reflect the unique characteristics of wetlands in Nebraska.

## <u>002</u> Application of Standards to Wetlands.

<u>002.01</u> These standards shall apply to all natural wetlands and all artificial wetlands except as provided in paragraph 002.02. Numerical criteria which rely on water in order to be measured, shall not be deemed applicable during periods when water is not present.

<u>002.02</u> These standards shall not apply to artificial wetlands constructed for the purpose of wastewater treatment, wastewater retention, or irrigation reuse. However, any discharge to surface waters from artificial wetlands constructed for these purposes shall meet the applicable standards for the receiving water.

<u>002.03</u> Wastewater from domestic, municipal, or industrial sources authorized by NPDES permits to discharge to wetlands shall meet all applicable standards for the wetland. No mixing zones shall be allowed within wetlands.

### Chapter 7

## 003 Wetland Classifications

Wetlands are classified into two categories based on hydrological characteristics which affect the attainable beneficial uses. For purposes of these standards, the two general classifications are surface-water overflow wetlands and isolated wetlands. Within each classification, specific wetland complexes and individual wetlands may be identified by their physical, chemical, and biological characteristics and functional values. Wetlands are defined in Chapter 1. Wetlands are identified and delineated using methods contained in the "Corps of Engineers Wetlands Delineation Manual," Technical Report Y-87-1, U.S. Army Engineer Waterway Experiment Station, Vicksburg, MS.

### 003.01 Surface-Water Overflow Wetlands.

These are wetlands which exhibit a surface water connection to an adjacent stream or lake on a regular or periodic basis. These wetlands have the potential to provide beneficial uses identical to those of the adjacent stream or lake in addition to the beneficial uses recognized for wetlands (paragraph 004). These wetlands shall be protected for the beneficial uses of the adjacent stream or lake as assigned in Chapters 5 or 6 in addition to those identified for wetlands. Water quality criteria associated with assigned beneficial uses of adjacent waterbodies (Chapter 4) shall apply to surface-water overflow wetlands in addition to criteria associated with wetland beneficial uses. When numerical criteria associated with wetland aquatic life beneficial uses differ with aquatic life criteria associated with the adjacent stream or lake, the more stringent criteria shall apply.

### 003.02 Isolated Wetlands.

These are wetlands which have no regular or periodic surface water connection to an adjacent stream or lake. The source of water for these wetlands may be either ground water or surface runoff. These wetlands shall be protected for the beneficial uses recognized for wetlands (paragraph 004). Water quality criteria associated with wetland beneficial uses shall apply to isolated wetlands.

## 004 Beneficial Uses

Beneficial uses are assigned to wetlands within or bordering upon the State of Nebraska. Assigned beneficial uses are protected by the narrative and numerical water quality criteria listed or referenced in this chapter. Additionally, assigned and existing beneficial uses are protected

Chapter 7

by the Antidegradation Clause in Chapter 3. Some uses require higher quality water than others. When multiple uses are assigned to the same wetland, all assigned uses will be protected.

Beneficial uses assigned to all wetlands are:

Aquatic Life

Wildlife

Agricultural Water Supply

Aesthetics

These uses are not intended in any way to conflict with the quantitative beneficial uses provided for in Neb. Rev. Stat., Ch 46, regulating irrigation or the authority of the Nebraska Department of Natural Resources.

## 004.01 Aquatic Life

Wetlands assigned this beneficial use provide, or could provide, habitat capable of supporting aquatic biota on a regular or periodic basis. Aquatic biota are life forms which require water to fulfill basic life functions such as reproduction, growth, and development. Examples of aquatic biota include, but are not limited to, fish, macroinvertebrates, amphibians, and hydrophytic vegetation.

### 004.01A General Criteria

Water quality criteria are established to protect assigned beneficial uses. However, traditional water quality parameters in wetlands such as pH, temperature, dissolved oxygen, ammonia, chloride, and conductivity may naturally vary outside accepted ranges for other surface waters. Water quality criteria for specific wetlands or wetland complexes, except numerical criteria for toxic substances (paragraph 004.01C1), petroleum oil (paragraph 004.01D), and residual chlorine (paragraph 004.01F), shall be based on natural background values for traditional water quality parameters. However, these criteria shall be no more stringent than those associated with the Class B Warmwater Aquatic Life classification or the General Criteria for Aquatic Life of Chapter 4, Paragraphs 003.01A, 003.01B, 003.01G, and 003.04B.

## 004.01B Biological Criteria

The biological integrity of wetlands shall be maintained and protected. Any human activity causing water pollution which would significantly degrade the biological integrity of wetlands is a violation of these Standards. Upland soil and water conservation practices or normal farming, silviculture, and ranching activities involving tilling, seeding, cultivating, harvesting, and grazing for the production of food, fiber, and forest products, shall not be considered to cause significant degradation of biological integrity in wetlands. However, the criteria in section 004.01C for toxic substances are applicable to wetlands where such toxic substances are the result of activities listed within this subsection.

<u>004.01B1</u> Any human activity causing water pollution which would cause a significant adverse impact to an identified "key species" is a violation of these Standards.

## 004.01B1a Key Species

Key aquatic species are identified endangered or threatened species. The following list defines the aquatic species considered by the Department to be key species. In addition to this list, any key species listed in Chapter 5 for a waterbody adjacent to a surface-water overflow wetland will be considered a key species for the wetland.

| COMMON NAME | SCIENTIFIC NAME |
|-------------|-----------------|
| COMMON NAME | SCIENTIFIC NAME |

**Endangered Species** 

Salicornia rubra Saltwort Colorado Butterfly Plant Gaura neomexicana coloradensis

## **Threatened Species:**

Western Prairie Fringed Platanthera praeclara

Orchid

**Ute Lady Tresses** Spiranthes diluvialis Small White Lady's Cypripedium candidum

Slipper

## Chapter 7

## 004.01C Toxic Substances

Wetlands shall be free from toxic substances, alone or in combination with other substances, in concentrations that result in acute or chronic toxicity to aquatic life, except as specified in Chapter 2. Toxic substances shall not be present in concentrations that result in bioaccumulation or biomagnification in aquatic organisms which renders them unsuitable or unsafe for consumption.

<u>004.01C1</u> The following numerical criteria for the protection of aquatic life and their uses shall not be exceeded. Unless otherwise noted, criteria are based on total concentrations.

<sup>&</sup>lt;sup>10</sup> Criteria for selenium apply to total recoverable concentrations

## Chapter 7

<u>004.01C2</u> The following criteria for the protection of human health based on consumption of fish and other aquatic organisms shall not be exceeded. These criteria are expressed as fish tissue concentrations (mg/kg fish).

| <u>POLLUTANT</u> | CRITERIA (mg/kg) | CAS<br><u>No.</u> * |
|------------------|------------------|---------------------|
| Methylmercury    | 0.215            | 22967926            |

<sup>\*</sup> Chemical Abstract Services Registry Number

004.01D Petroleum Oil.

Not to exceed 10 mg/l.

004.01E Alkalinity

No less than 20 mg/l as CaCO<sub>3</sub> except where natural background is less.

## 004.01F Residual Chlorine

004.01F1 One-hour average concentration not to exceed 19 ug/l.

004.01F2 Four-day average concentration not to exceed 11 ug/l.

## Chapter 7

## 004.02 Wildlife

Wetlands assigned this beneficial use provide, or could provide, habitat capable of supporting wildlife on a regular or periodic basis. Wildlife are undomesticated terrestrial or avian life forms which may utilize wetlands to support life functions such as watering, feeding, loafing, predator protection, and nesting. Examples of wildlife include, but are not limited to, furbearers, waterfowl, shorebirds, migratory birds, and reptiles.

### 004.02A General Criteria

Because wildlife utilizing wetlands rely on aquatic biota in many cases for food and habitat, general criteria and toxic criteria listed for the protection of aquatic life (paragraphs 004.01A and 004.01C) shall also apply for the protection of wildlife.

## 004.02B Biological Criteria

Any human activity causing water pollution which would cause a significant adverse impact to an identified "key species" is a violation of these Standards.

### Chapter 7

## 004.02B1 Key Species

Key wildlife species are identified endangered or threatened species. The following list defines the wildlife species considered by the Department to be key species.

## <u>COMMON NAME</u> <u>SCIENTIFIC NAME</u>

## **Endangered Species:**

Eskimo Curlew Numenius borealis Whooping Crane Grus americana

Interior Least Tern Sterna antillarum athalassos

River Otter Lutra canadensis

American Burying Beetle Nicrophorus americanus Salt Creek Tiger Beetle Cincindela nevadica

lincolniana

## **Threatened Species:**

Bald Eagle Haliaeetus leucocephalus Piping Plover Charadrius melodus

## 004.03 Agricultural Water Supply

Wetlands assigned this beneficial use are used or have the potential to be used for general agricultural purposes (e.g., irrigation and livestock watering) without treatment. In some cases, however, natural background water quality may limit their use for agricultural purposes.

## 004.03A General Criteria

Wastes or toxic substances introduced directly or indirectly by human activity in concentrations that would degrade the use (i.e., would produce undesirable physiological effects in crops or livestock) shall not be allowed. Where natural background water quality limits the use of a wetland for agricultural purposes, water quality criteria for conductivity and selenium shall be based on the natural background condition.

## Chapter 7

<u>004.03B</u> Conductivity.

Not to exceed 2,000 umhos/cm between April 1 and September 30.

<u>004.03C</u> Nitrate and Nitrite as Nitrogen.

Not to exceed 100 mg/l.

004.03D Selenium.

Not to exceed 0.02mg/l.

<u>004.04</u> Aesthetics.

This use applies to all wetlands of the state. To be aesthetically acceptable, wetlands shall be free from human-induced pollution which causes: 1) noxious odors; 2) floating, suspended, colloidal, or settleable materials that produce objectionable films, colors, turbidity, or deposits; and 3) the occurrence of undesirable or nuisance aquatic life (e.g., algal blooms). Wetlands shall also be free of junk, refuse, and discarded dead animals.
